### DETAILED ACTION

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 22-27 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Applicant has now included in claim 22 the phrase, "at least one stabilizer selected from the group consisting of valine in an amount of from about 5-20 mmol/l and proline in an amount of from about 10-500 mmol/l". This new limitation finds no support in the instant specification. Without such support for this limitation the claims are properly rejected. The specification only provides support for the combination of both proline and valine in these ranges not for one or the other.

Claims 10-14, 20 and 22-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Segal et al.-Symposium on Pyridoxal Enzymes (Segal 1) in combination with Segal et al.-Biochemical and Biophysical Research Communications

(Segal 2) in view of JP 08187095 ('095) and JP 60-224499 ('499) for the reasons of record and for the reasons which follow.

Applicant has now included in claim 22 the phrase, "at least one stabilizer selected from the group consisting of valine in an amount of from about 5-20 mmol/l and proline in an amount of from about 10-500 mmol/l". This new limitation finds no support in the instant specification. Without such support for this limitation the claims are properly rejected. The specification only provides support for the combination of both proline and valine in these ranges not for one or the other. Further, it is noted that valine and proline are used at a concentration of 100 mmol/l in Segal 1.
